

COMPENG 2SH4 Project – Statement of Contribution

Your Group Number _____ YazanKh _____

Your Name _____ Yazan Khatib _____

Your Team Member's Name _____ 1-member team _____

You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.

Since this was a one-person team, I was responsible for completing the entire project. I created every iteration and every class.

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.

Again, since this is a one-person team I did not have a partner therefor my partner did not contribute anything.

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.

I definitely feel like I could have completed the project much quicker if I had collaborated with someone. There were plenty of times during development when just having a fresh set of eyes on the code would have helped me solve bugs, memory leaks, and segmentation errors much faster, saving me a lot of time. Additionally, working with a partner would have allowed me to split the workload. Which would allow me to be able to implement a food class and gone for the above and beyond features. I think overall I did gain a lot of experience from tackling this on alone, but I would have liked to have at least gotten some experience in collaborative software development.
